AI Search Is Here

Google Was Here 20 Years. Now AI Is Here.

That's it. That's the shift.

For two decades, Google Search was how people found information. You optimised for rankings. You measured traffic. You counted clicks.

That era is ending.

The Web Reality

1.3 billion websites exist.

Only **200 million are active** — maintained, updated, serving a purpose.

The rest — 1.1 billion — are parked, abandoned, dormant, spam. Noise.

Of the 200 million that matter, not all are affected equally.

Who's Affected and When

Type	Example	AI Impact	What's Happening NOW	Why
Pure transactional	E-commerce, bookings, SaaS signups	Discovery shifting — transactions still happen but path is changing	AI building trust maps, shaping consideration sets	People still click to buy, but AI decides who they consider
Informational AI cites	Wikipedia, academic journals, authoritative reference	Survives — AI uses as source	Being cited, traffic may increase	AI needs trusted sources to reference
Informational AI replaces	Stack Overflow, Chegg, WebMD, how-to sites, Q&A forums	Traffic declining	Users get answers without clicking	AI answers the question directly — no need to visit
Commercial blog (content marketing)	Joe's fish shop blog, affiliate sites	Getting hit	Informational content losing visibility	AI sees through the disguise — content marketing is still informational
Corporate brochure	Company "About Us", services pages	Low impact	Minimal change	Not search dependent — people arrive directly or via referral

Nonprofit	Charities, NGOs, causes	Mixed	Informational content hit, donation pages survive	Depends if they're answering questions or asking for action
Government	Services, forms, information	Mixed	Informational hit, transactional survives	Forms and services still need clicks; information doesn't
Portfolio / Personal	Freelancer sites, resumes, personal brands	Low impact	Minimal change	Not search dependent — people arrive via referral or direct
News / Media	Publishers, journalism	Traffic declining	AI summarises instead of clicks	Users get the story without visiting — AI reads it for them
Comparison / Aggregator	Review sites, price comparison	Being replaced	AI compares directly	AI can read all reviews and synthesise — why visit ten sites?
Educational / Courses	Coursera, Udemy, training providers	Discovery hit, transactions survive	Fewer people finding courses via search	AI answers "how do I learn X" — discovery bypassed
Professional services	Lawyers, accountants, consultants	Discovery shifting	AI shaping shortlists before visit	AI recommends who to consider — your site is for conversion, not discovery
Health / Medical	Symptom checkers, health advice	Traffic declining	Users asking AI instead	AI answers health questions directly — faster, private
Finance / Advisory	Investment advice, financial guidance	Traffic declining	Users asking AI instead	AI provides guidance without the website visit
Local services	Plumbers, electricians, restaurants	Lower impact	Proximity still matters	AI can't fix your pipes — local still needs a human
Forums / Community	Reddit, Quora, niche forums	Mixed	Reddit cited, others declining	AI trusts Reddit; others are being replaced
Software documentation	Technical docs, API references	Varies	Quality docs cited, others replaced	AI cites authoritative technical sources
Recipe / Lifestyle	Food blogs, DIY, home improvement	Traffic declining	AI gives recipe directly	No need to scroll past ads — AI extracts the answer
Travel / Hospitality	Guides, reviews, booking info	Mixed	Info hit, booking survives	AI tells you where to go; you still click to book
Real estate	Listings, property info	Discovery shifting	Info hit, listings survive	AI answers questions; transactions still need the listing

What This Means For You

If you run an informational site (how-to, Q&A, advice, guides):

The shift has already happened. AI answers the questions you used to rank for. Users don't click. Stack Overflow lost 78% of questions in one year. Chegg is laying off 45% of staff. WebMD lost 43% of monthly users. If you haven't already seen traffic decline, you will within 3-6 months.

If you run a comparison or review site:

AI compares for people. It reads reviews and synthesises. Users get the answer without visiting ten sites. Your model is being replaced now. By 2027, traditional ranking position will no longer predict traffic for your query types.

If you run a news or media site:

AI summarises. Users get the headline, the key facts, the context — without clicking through. Business Insider traffic down 48.5%. This is the 2025-2026 acceleration phase. By 2027, blue links become decorative for news queries.

If you run an e-commerce store:

You have more time — 18-24 months before discovery fundamentally shifts. People still click to buy. But AI is building trust maps now. If AI doesn't recognise you as a trusted entity by 2027, you won't be in the consideration set. The transaction survives; the path to it is changing.

If you're a professional services firm (lawyers, accountants, consultants):

Hybrid site. 18-24+ months to establish AI trust, with only 15-25% success rate. AI shapes the shortlist before anyone visits your site. If you start now, you may reach trust acceptance by 2027-2028. If you wait, you face structural disadvantage that compounds.

If you're an agency selling SEO:

Your clients are seeing traffic decline now. Their rankings may be stable, but clicks are down 41% even on queries without AI Overviews. Your metrics are lying — impressions up, CTR collapsing. By 2027, keyword-based SEO collapses entirely. You have 12-18 months to develop AI visibility capability or your service becomes obsolete.

If you're a tool provider to the marketing industry:

The tools you sell measure the old game. Rankings, backlinks, keyword positions — these matter less when 69% of searches end without a click. By 2027, traditional SEO metrics become unreliable for most query types. Your customers need to measure something new. 12-18 months to pivot or become irrelevant.

If you run a recipe, lifestyle, or DIY site:

AI gives the recipe directly. The user doesn't scroll past your ads. They ask, they get, they cook. This is happening now. 3-6 months to see significant decline if you haven't already. By 2027, this category is functionally invisible unless AI cites you as an authoritative source.

If you run an educational platform:

Discovery is hit now. People ask AI "how do I learn X" and get an answer. Your courses may still convert, but 50-70% of educational sites will lose meaningful visibility by 2028-2029. Paid acquisition costs rise as organic falls. 12-18 months to establish AI trust for commercial educational content.

If you're Wikipedia or an authoritative reference:

You survive. AI cites you. You're a source, not a competitor. But you're in the 1-5% that gains exponential visibility. The exception, not the rule.

AI Search Impact by Industry

1. Agriculture, Forestry & Fisheries

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Agriculture – Career Guide	Informational hit	Traffic declining	AI answers farming career questions directly	Rural job seekers increasingly using AI for career guidance — bypasses traditional agricultural career sites
Forestry	Mixed	Discovery shifting	Technical info replaced, services still need contact	Forestry regulations and safety info being answered by AI; contractor services still need human contact
Fisheries	Mixed	Discovery shifting	Same pattern	Commercial fishing crew recruitment still relationship-based; informational content on fishing careers hit
Agricultural Services & Supplies	Transactional shift	AI shaping consideration	People still buy, but AI influences who they consider	Equipment suppliers being compared by AI; those not in AI trust maps losing visibility
Animal Services & Supplies	Transactional shift	AI shaping consideration	Same pattern	Veterinary supply information answered by AI; transactions still happen but discovery changing

2. Transportation, Warehousing & Distribution Services

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Road Transportation	Mixed	Discovery shifting	Career info hit, logistics services transactional	Trucking career queries answered by AI; freight quotes still need direct contact
Rail Transportation	Mixed	Discovery shifting	Same pattern	Rail career information commoditised; operational services remain transactional
Air Transportation	Mixed	Discovery shifting	Same pattern	Aviation career questions answered by AI; airline bookings still transactional
Sea, Water Transportation	Mixed	Discovery shifting	Same pattern	Maritime career info hit; shipping services transactional
Vehicle Parts, Servicing & Repairs	Transactional shift	AI shaping consideration	People still need repairs, but AI influences where	Local mechanic discovery shifting to AI recommendations; reviews being synthesised
Freight & Warehousing Services	Transactional shift	AI shaping consideration	B2B still needs quotes, but AI pre-qualifies	Logistics providers being compared by AI; those without AI visibility losing RFP consideration
Distribution Related Services	Transactional shift	AI shaping consideration	Same pattern	Supply chain information answered by AI; service providers need AI trust
Transportation Support Services	Transactional shift	AI shaping consideration	Same pattern	Support service discovery shifting; transactions still need human contact

3. Hospitality, Travel & Recreational Services

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Tourist Attractions & Services	Mixed	Info hit, bookings survive	AI describes attractions; people still book	Destination guides being replaced by AI; booking transactions survive
Outdoor Activities & Equipment	Mixed	Info hit, sales survive	AI answers "what gear do I need"; purchases still happen	Gear comparison content being replaced; e-commerce transactions continue
Restaurants, Bars & Eateries	Local buffer	Discovery shifting	Proximity matters; AI can't eat for you	Review aggregation by AI; but local still requires visit
Accommodation & Venues	Mixed	Info hit, bookings survive	AI compares hotels; people still book	Travel guide content destroyed; booking platforms survive

Entertainment Services & Equipment	Mixed	Info hit, sales survive	AI answers entertainment questions; purchases continue	Event information commoditised; ticket sales transactional
Event Supplies & Services	Transactional shift	AI shaping consideration	People still hire, but AI influences who	Event planning info answered by AI; vendor discovery shifting
Hospitality Equipment & Supplies	Transactional shift	AI shaping consideration	B2B purchasing; AI pre-qualifies vendors	Equipment comparison by AI; suppliers need AI visibility
Public Facilities & Services	Informational hit	Traffic declining	AI answers facility questions directly	Public amenity information commoditised
Sports Equipment & Supplies	Mixed	Info hit, sales survive	AI answers "what equipment do I need"; purchases continue	Gear guides being replaced; e-commerce survives

4. Personal Care, Food, Clothing & Homewares

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Personal Care Supplies & Accessories	Transactional shift	AI shaping consideration	People still buy; AI influences what	Product comparison by AI; brands not in AI trust losing visibility
Foodstuffs & Beverages	Transactional shift	AI shaping consideration	People still buy; AI influences choices	Recipe content destroyed; grocery transactions survive
Food Manufacturing & Equipment & Supplies	Transactional shift	AI shaping consideration	B2B purchasing; AI pre-qualifies	Industry equipment comparison by AI
Clothing & Footwear	Transactional shift	AI shaping consideration	People still buy; AI influences style choices	Fashion advice being answered by AI; e-commerce survives
Housewares, Furniture & Appliances	Transactional shift	AI shaping consideration	People still buy; AI compares products	Product review content being synthesised by AI
Personal Care Services	Local buffer	Discovery shifting	Services need human delivery	Salon/spa discovery shifting; services still need appointment
Clothing Manufacturing, Services & Supplies	Transactional shift	AI shaping consideration	B2B; AI pre-qualifies suppliers	Supplier discovery shifting to AI
Child, Baby Products & Services	Mixed	Info hit, sales survive	Parenting advice answered by AI; products still purchased	Parenting content destroyed; e-commerce survives
Household Consumables & Services	Transactional shift	AI shaping consideration	People still buy; AI influences choices	Product comparison by AI

5. Education, Sports & Careers

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Tertiary & Industry Education	Discovery hit	Fewer finding via search	AI answers "what should I study"	Course discovery bypassed; enrolments still happen but path changed
Schools, Colleges & Child Care Institutions	Mixed	Info hit, enrolments survive	AI answers school comparison questions	School review content commoditised; enrolments transactional
Arts, Music, Culture, Services & Supplies	Mixed	Info hit, sales survive	AI answers "how to learn guitar"; purchases continue	Tutorial content hit; instrument sales survive
Sports Clubs, Organisations & Facilities	Local buffer	Discovery shifting	Membership still local	Club information commoditised; joining still requires local action
Employment & Career Services	Informational hit	Traffic declining	AI provides career advice directly	Career guidance sites hit hardest — CV4Students model proves alternative exists

Social Clubs, Hobbies & Supplies	Mixed	Info hit, sales survive	AI answers hobby questions; purchases continue	How-to content replaced; supplies still purchased
Educational Equipment & Supplies	Transactional shift	AI shaping consideration	Schools still buy; AI influences choices	Supplier comparison by AI
Private Tuition & Training Organisations	Discovery hit	Fewer finding via search	AI answers "how to learn X"	Tutoring discovery shifting; sessions still need human
Education Support Services	Transactional shift	AI shaping consideration	Schools still contract; AI influences choices	Vendor discovery shifting

6. Property Services

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Interior Finishing Services	Local buffer	Discovery shifting	Work needs human delivery	How-to content hit; service bookings still need local contact
Design & Planning	Mixed	Info hit, services survive	AI answers design questions; projects need humans	Design inspiration content commoditised; professional services survive
Building Services	Local buffer	Discovery shifting	Work needs human delivery	Building advice answered by AI; contractors still need local trust
Building Construction Contractors	Local buffer	Discovery shifting	Work needs human delivery	Contractor discovery shifting to AI recommendations
Property Sales & Project Establishment	Mixed	Info hit, listings survive	AI answers property questions; transactions need agents	Property guides hit; listings transactional
Building Site Support	Transactional shift	AI shaping consideration	B2B; AI pre-qualifies suppliers	Supplier discovery shifting
Civil Works, Construction & Landscaping	Local buffer	Discovery shifting	Work needs human delivery	Project information commoditised; contracts local
Property Management & Maintenance	Local buffer	Discovery shifting	Services need local delivery	Property advice answered by AI; services still local

7. Business, Administration & Support Services

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Business Support & Services	Transactional shift	AI shaping consideration	Businesses still contract; AI influences choices	Business advice being answered by AI; service providers need AI visibility
Office Supplies, Furniture & Equipment	Transactional shift	AI shaping consideration	Businesses still buy; AI compares	Product comparison by AI
Financial & Legal Services	Discovery shifting	AI shaping shortlists	Professional services still need humans; discovery changing	Financial/legal advice answered by AI; consultations still need professionals
Media Advertising & Marketing	Severe disruption	Metrics lying, models breaking	Industry built on old search; AI changes everything	SEO agencies losing relevance; AI visibility not yet offered
Primary Industries, R&D, Trade & Enterprise	Mixed	Info hit, transactions survive	Industry information commoditised; B2B transactional	Research info answered by AI; commercial transactions survive
Communication, Computer & IT Support	Mixed	Info hit, services survive	Tech support info answered by AI; services still needed	Stack Overflow destroyed; IT service providers survive but discovery shifting
Government & Public Services	Informational hit	Traffic declining	AI answers government questions directly	Public information commoditised; transactions still need official channels

Retail Businesses & Wholesalers	Transactional shift	AI shaping consideration	People still buy; AI influences where	Product discovery shifting; e-commerce survives
Industrial, Manufacturing & Production Industries	Transactional shift	AI shaping consideration	B2B; AI pre-qualifies suppliers	Supplier comparison by AI; those without visibility losing RFPs

8. Health Care & Community Services

Sub-Category	AI Impact	What's Happening NOW	Why	Industry Intel
Medical Specialists	Discovery shifting	AI shaping referrals	Patients still need specialists; AI influences choice	Specialist information answered by AI; referrals still need professionals
Primary Health Care Providers	Local buffer	Discovery shifting	Care needs human delivery	Health questions answered by AI; appointments still local
Mental Health & Counseling	Discovery shifting	AI shaping consideration	Therapy needs humans; AI influences who	Mental health info commoditised; therapist discovery shifting
Community Support Services	Informational hit	Traffic declining	AI answers support questions	Service information commoditised; actual support still human
Home Support, Care & Disability Services	Local buffer	Discovery shifting	Care needs human delivery	Care information answered by AI; services still local
Health Support Services	Mixed	Info hit, services survive	Health info answered by AI; services transactional	Health advice commoditised; professional services survive
GP's, Hospitals, Medical Centres, Rest Homes & Pharmacies	Local buffer	Discovery shifting	Care needs local delivery	Facility information commoditised; visits still local
Medical Supplies, Equipment & Health Insurance	Transactional shift	AI shaping consideration	People still buy; AI compares	Product/policy comparison by AI; purchases transactional
Natural Health Products & Services	Mixed	Info hit, sales survive	AI answers natural health questions; products still purchased	Natural health advice commoditised; e-commerce survives

---

The Proof

These aren't predictions. This already happened.

ChatGPT Scale

Metric	Number	Context
Weekly active users	800 million+	10% of the world's population
Monthly visits	5.8 billion	#6 most visited website globally
Daily queries	2.5 billion prompts	29,000 per second
Daily active users	122 million	More than many countries' populations
Session length	14+ minutes average	Longer than Amazon, BBC, social media

Growth: - Nov 2023: 100 million weekly users - Feb 2025: 400 million weekly users - Oct 2025: 800 million weekly users - **8x growth in 2 years**

79.77% of traffic is DIRECT — people type chatgpt.com or have it bookmarked. This isn't curiosity. It's habit.

Google Organic CTR Has Collapsed

Metric	Before AI Overviews	After AI Overviews	Change
Organic CTR (with AIOs)	1.76%	0.61%	-61%
Paid CTR (with AIOs)	19.7%	6.34%	-68%
Organic CTR (without AIOs)	2.75%	1.62%	-41%

Source: Seer Interactive, September 2025 — 3,119 queries, 42 organizations, 25.1 million impressions

Even queries WITHOUT AI Overviews are down 41%. Users are clicking less everywhere.

Publisher Traffic Is Already Down

Source	Traffic Change	Period
Global Google organic search	-33%	Nov 2024 → Nov 2025
US Google organic search	-38%	Nov 2024 → Nov 2025
Median publisher overall	-10%	H1 2025 YoY
Non-news content sites	-14%	H1 2025 YoY

Source: Chartbeat data via Reuters Institute, January 2026

Publishers expect traffic to decline **43% average** over the next 3 years. Some expect **75%+ loss**.

The Casualties

Company	What Happened	Timeline
Stack Overflow	Monthly questions: 200,000 (2014) → 3,862 (Dec 2025). 78% decline in one year. Back to 2008 launch levels.	2022-2025
Chegg	Non-subscriber traffic -49%. Revenue -24%. Laying off 45% of workforce. Stock near delisting. Suing Google.	2024-2025
Business Insider	Traffic -48.5% YoY	2024-2025
WebMD	Monthly users -43% (122M → 69.5M)	2024-2025
Investopedia	Traffic -33.2%	2024-2025
Quora	Traffic -28.1%	2024-2025

Zero-Click Searches

Year	Zero-Click Rate
2024	56%
May 2025	69%

Up to 69% of Google searches now end without any click to a website.

When AI Overviews appear, users are **half as likely to click** (8% vs 15% CTR).

The Behavioural Shift Is Permanent

OpenAI's own research (1.5 million conversations, May 2025):

Usage Type	Percentage
Asking questions	49%
Getting work done	40%
Exploring ideas	11%

49% of ChatGPT usage is people asking questions — the exact behaviour that used to go to Google Search.

Demographics have normalised: - Gender gap closed (52% feminine names by July 2025, up from 37% in Jan 2024) - Age spread across all groups - Lowest-income countries growing **4x faster** than highest-income

This isn't early adopters anymore. This is mainstream behaviour.

AI Traffic Converts Better

Source	Conversion Rate
ChatGPT referral traffic	11.4%
Organic search	5.3%
Social media	~6%

Source: Similarweb, September 2025. ChatGPT-referred visitors convert significantly better than social and organic search in research-driven categories. Results vary by sector.

Users who arrive via AI are more qualified, more intent-driven. They've already been filtered.

Your Options

There are four.

Option 1: Do Nothing

What this means: - Continue current operations - Monitor situation as it develops - Allocate resources elsewhere

Factual tradeoffs: - No immediate capital outlay - Preserves focus on existing business - Traffic patterns will continue on current trajectory (data shows 15-40% annual decline for affected categories) - Competitors may or may not act - Market may or may not develop solutions you can adopt later

Who this makes sense for: - Companies not heavily dependent on search traffic - Businesses with other strong acquisition channels - Organizations that believe the shift will reverse or stabilise - Those who prefer to be fast followers rather than first movers

Real risk: The data shows 33-38% publisher traffic decline in 12 months. This is the baseline if nothing changes.

Option 2: Build It Yourself

What this means: - Internal R&D to develop AI visibility methodology - Create measurement systems - Test and validate across your own properties - Build team expertise organically

Factual tradeoffs: - Full control over methodology and implementation - Intellectual property stays internal - Tailored to your specific needs - Timeline: Realistically 18-36 months to develop, test, validate - Cost: Engineering, research, testing resources - Outcome uncertainty: No existing blueprint to follow

Who this makes sense for: - Large organisations with strong R&D capabilities - Companies with time runway before AI impact hits their sector - Businesses that want proprietary solutions not available to competitors - Organisations sceptical of external frameworks

Real consideration: Building a complete AI visibility methodology from scratch requires significant investment and time. Few have done it successfully.

Option 3: Hire Expertise

What this means: - Engage consultants, agencies, or specialists - Buy expertise rather than build or acquire IP

Factual tradeoffs: - Lower commitment than building - Flexible engagement terms - Access expertise without owning methodology - Dependent on quality of hired talent - No proprietary advantage (competitors can hire same people)

Current market reality: - Traditional SEO expertise doesn't transfer directly (different evaluation criteria) - AI visibility as a discipline is new — limited proven practitioners exist - No standardised certifications or training programmes (yet) - Quality varies significantly

Who this makes sense for: - Companies wanting to test the space before major commitment - Organisations that prefer operational expense over capital expense - Businesses that don't need proprietary competitive advantage - Those who believe talent market will develop quickly

Real consideration: The talent pool is genuinely limited. This isn't fear — it's a function of how new the discipline is.

Option 4: Wait For Tools To Emerge

What this means: - Let the market mature - Adopt solutions when they become available - Focus resources on current priorities

Factual tradeoffs: - No immediate investment required - Benefit from others' R&D and mistakes - Solutions will likely be more refined when they arrive - Timeline to market-ready tools: Unknown, likely 12-24 months for basic, longer for comprehensive - First-mover advantage goes to others - May pay premium prices for mature solutions

Who this makes sense for: - Companies in sectors not yet heavily impacted - Organisations with limited capital for speculative investments - Businesses comfortable being fast followers - Those who believe commoditised tools will be sufficient

What's emerging:

Tools and frameworks for AI visibility are beginning to appear. Examples include:

- **AIVA (AI Visibility Architecture)** — an 11-stage methodology with operational proof (CV4Students scores 96/100 on AIVA diagnostic criteria across 90+ countries)
- Various AI monitoring tools tracking citations and mentions
- Platform-specific analytics from AI providers

The market is early. More will emerge.

Real consideration: Tools will emerge. The question is timing relative to your traffic trajectory.

Honest Comparison

Factor	Do Nothing	Build	Hire	Wait for Tools
Capital required	$0	Significant	Variable	$0 now
Time to capability	N/A	18-36 months	3-6 months	12-24+ months
Proprietary advantage	No	Yes	No	No
Proven methodology	N/A	Unproven	Varies	Varies
Risk profile	Market risk	Execution risk	Talent risk	Timing risk
Control	Full	Full	Partial	None initially

Questions To Ask Yourself

1. How exposed is your business to AI search impact? - Check the impact table above - High exposure → Act sooner - Low exposure → More options viable

2. What's your capital position? - Strong capital → Build option is open - Limited capital → Hire or wait more practical

3. What's your risk tolerance? - Prefer certainty → Wait for proven tools - Comfortable with uncertainty → Build or hire early

4. What's your competitive philosophy? - Category definer → Build or adopt early - Fast follower → Wait for tools

5. What's your timeline? - Urgent (traffic declining now) → Hire or adopt what exists - Patient (runway available) → Build or wait

---

The Timeline

Phase	Years	What's Happening
Foundation	2023	ChatGPT reaches 100M+ users
Integration	2024	Google AI Overviews launch, traffic shifts begin
Acceleration	2025-2026	15-25% informational queries migrate to AI
Projected Dominance	2026-2027	40-60% of queries via AI
First Break Point	2027	Traditional SEO metrics become unreliable
Displacement	2028-2029	Clear winners and losers emerge
AI-First Internet	2030-2035	New visibility hierarchy fully established

---

The Bottom Line

Google was here 20 years. Now AI is here.

The shift has happened. The data is clear. The casualties are real.

What you do about it depends on who you are, where you sit in the impact table, and what resources you have.

Each option is legitimate. The right choice depends on your specific situation, not on fear of what might happen.

What matters is making the choice deliberately, with clear understanding of tradeoffs.

Access and Scope Notice: Detailed methodologies for AI visibility measurement, architectural frameworks, and diagnostic practices are maintained separately. This paper describes the structural gap — not the operational response. Public documentation describes what is happening, not how to address it.
